

Customizations in taxi app

- From admin we can a vehicle type → commercial
- in user app commercial vehicles will have time based booking
- and commercial vehicles can have vehicles like jcb, road roller, and some other vehicle that can be booked on time based
- user can choose which vehicle they want and for how much time they want
- user can choose vehicle type and for how much hours they want and at which location they want
- once user submitted this request then it will go near by drivers and driver can accept this booking and can go to consumer location and can start the service, once service start a time must be start in user can driver both devices.
- once task is complete then pricing will be calculated on the time basis that they used
- if driver want to give any extra charges then they add it on billing page.
